D1803	1J804-18930	1J804D18910

PROGRAM FEATURES

Complete No-Hassle Kit: For a no-hassle experience the kit includes everything required to complete the exchange including DPF gaskets. The kit comes in a returnable shipping box designed exclusively for Kubota DPFs. All gasket flange surfaces are cleaned and ready for installation. Most DPFs get a fresh coat of high temp paint as part of the final quality inspection process!

Free Nationwide Collection: Kubota pays the return shipping cost.* Just use the returnable shipping box to safely return your old DPF for worry free packaging and shipping. Core credit is issued to distributor upon return and inspection of the original DPF. When core credit is issued (or denied) an email confirmation will be sent.

Maximum Cleaning Potential: In addition to pneumatic cleaning (pressurized air) each filter receives a high temp thermal bake in a specialized kiln. This extra deep cleaning may cost additional from other cleaning sources, but it is standard for DPFs cleaned by Kubota.

Trustworthy Cleaning: Every cleaned DPF comes with a certificate to demonstrate that we are absolutely confident in the level of cleaning for each DPF. Each certificate is prepared to match the DPF serial number.

* Only when shipped within United States
